1	Managing	Power	Consum	ntion in	Networks	on ·	Chin
	Managing	I OME	CONSUM		MOUNDING	UII	OLIID

T. Simunic, S. Boyd

March 2002 Proceedings of the conference on Design, automation and test in Europe

Full text available: pdf(241.74 KB) Publisher Site

Additional Information: full citation, abstract

Systems on a chip (SOCs) are rapidly evolving into larger networks on achip (NOCs). This work presents a new methodology for managingpower consumption for NOCs. Power management problem isformulated using closed-loop control concepts, with the estimator trackingchanges in the system parameters and recalculating the new powermanagement policy accordingly. Dynamic voltage scaling and localpower management are formulated in the node-centric manner, whereeach core has its local power manager that de ...

2 Geography-informed energy conservation for Ad Hoc routing

Ya Xu, John Heidemann, Deborah Estrin

July 2001 Proceedings of the 7th annual international conference on Mobile computing and networking

Full text available: pdf(399.65 KB)

Additional Information: full citation, abstract, references, citings, index terms

We introduce a geographical adaptive fidelity (GAF) algorithm that reduces energy consumption in ad hoc wireless networks. GAF conserves energy by identifying nodes that are equivalent from a routing perspective and then turning off unnecessary nodes, keeping a constant level of routing fidelity. GAF moderates this policy using application- and systemlevel information; nodes that source or sink data remain on and intermediate nodes monitor and balance energy use. GAF is indepen ...

3 Energy conservation for mobile devices: Ghosts in the machine: interfaces for better power management

Manish Anand, Edmund B. Nightingale, Jason Flinn

June 2004 Proceedings of the 2nd international conference on Mobile systems, applications, and services

Full text available: pdf(294.14 KB) Additional Information: full citation, abstract, references, index terms

We observe that the modularity of current power management algorithms often leads to poor results. We propose two new interfaces that pierce the abstraction barrier that inhibits device power management. First, an OS power manager allows applications to query the current power mode of I/O devices to evaluate the performance and energy cost of

**Keywords**: adaptive caching, energy-awareness, power management 4 Design strategies for controlling standby leakage: An MTCMOS design methodology and its application to mobile computing Hyo-Sig Won, Kyo-Sun Kim, Kwang-Ok Jeong, Ki-Tae Park, Kyu-Myung Choi, Jeong-Taek Kong August 2003 Proceedings of the 2003 international symposium on Low power electronics and design Full text available: pdf(613.21 KB) Additional Information: full citation, abstract, references, index terms The Multi-Threshold CMOS (MTCMOS) technology provides a solution to the high performance and low power design requirements of modern designs. While the low Vth transistors are used to implement the desired function, the high Vth transistors are used to cut off the leakage current. In this paper, we (i) examine the effectiveness of the MTCMOS technology for the Samsung's 0.18?m process, (ii) propose a new special flip-flop which keeps a valid data during the sleep mode, and (iii) develop a method ... Keywords: CCS, CPFF, MTCMOS, leakage current, low power Articles: The cougar approach to in-network query processing in sensor networks Yong Yao, Johannes Gehrke September 2002 ACM SIGMOD Record, Volume 31 Issue 3 Full text available: 🔁 pdf(988.47 KB) Additional Information: full citation, abstract, references, citings The widespread distribution and availability of small-scale sensors, actuators, and embedded processors is transforming the physical world into a computing platform. One such example is a sensor network consisting of a large number of sensor nodes that combine physical sensing capabilities such as temperature, light, or seismic sensors with networking and computation capabilities. Applications range from environmental control, warehouse inventory, and health care to military environments. Existi ... Application-driven power management for mobile communication Robin Kravets, P. Krishnan July 2000 Wireless Networks, Volume 6 Issue 4 Full text available: pdf(301.68 Additional Information: full citation, references, citings, index terms KB) Pulsed battery discharge in communication devices C. F. Chiasserini, R. R. Rao August 1999 Proceedings of the 5th annual ACM/IEEE international conference on Mobile computing and networking Full text available: pdf(1.33 MB) Additional Information: full citation, references, citings, index terms Power management techniques for mobile communication Robin Kravets, P.
